September 2022

PREFACE

Institution of Foresters Kerala (IFK) is a society registered in the year 1987 under the Travancore Literary, Science and Charitable Societies Act 1955 with its Central office at Thiruvananthapuram. Later it has established two Regional Chapters one at Thrissur and another at Kozhikode. One of the objectives of IFK is to undertake studies on topics useful in Forest Management and Biodiversity conservation. Accordingly, a Project- “A comprehensive study on the socio-economic and cultural aspects of sacred groves in the whole of Kerala” was prepared and submitted to Kerala Forest Department in June 2012. This project was examined and discussed by the Kerala Forest Development Fund Research Committee in its meeting held on 18th August 2012 and it was approved for implementation. The project envisages a detailed study of Sacred Groves (SGs) in all the 14 districts of Kerala one by one.

To start with Thiruvananthapuram District was allotted and IFK completed the study and submitted the report in November 2013. Subsequently reports on other eleven districts were completed and reports submitted in 2022 making the total number to 12.

Now we are submitting the 13th Report – Erakulam. A team headed by a retired Section Forest Officer carried out the data collection by inspecting each sacred grove. Their activity was supervised by an Asst. Conservator of Forests (Retd). The data collection was checked in the field at random by senior members of IFK Executive Committee on different occasions. The field team had a laborious task before them to reach the SGs in remote areas and to visit the same SGs on different times to complete the data collection. Dr. N. Sasidharan, and Prof. Dr. Jomy Agustin, experts on Botany joined us in detailed identification of flora in selected twenty SGs distributed over all the seven taluks.

IFK record its immense gratitude to Kerala Forest Department in entrusting this glorious task with it. We also thank Sri. S.Gopalakrishnan IFS, Addl.PCCF in the earlier stages for his guidance and also that of Sri. D.K.Verma, PCCF (Planning and Development) for their guidance and promptness in removal of impediments in the most appropriate manner in the beginning and to complete the study in the best possible way. We are also thankful to the successor Sri. D.Jayaprasad IFS PCCF (Development and Planning) for his cooperation in our efforts to carry out the project work in the most possible manner side lining the Covid pandemic. Our thanks are due to the members of the KFDF Research Committee for their positive attitude in IFK’s activities. Finally we express our thanks in no small measure to

other officers and staff at Forest Headquarters, particularly the DCFD Development and his assisting team in extending fair approach to IFK to make this activity hassle free.

This study report may serve as the valid document on the status and distribution of Sacred Groves in the district. It is our modest expectation that it forms the basis for future planning on the conservation of this precious eco-system

It will be our pleasure to clarify any of the details included in this report to all those concerned. It may please be noted that ownership details and similar matters are recorded based on information supplied by the custodian or his representative present at the time of data collection at the sacred grove and not by perusing any of the legal documents which is not practicable always. We also welcome suggestions for improvement and also our omissions in the listing from readers.

30-09- 2022

M.S. Nair (President)
Institution of Foresters Kerala

ACKNOWLEDGEMENT FOR SERVICES RENDERED

This project report is the result of the sincere and hard work contributed by a number of members of IFK and Botany expert. On behalf of IFK, I take immense pleasure in extending deep gratitude to them. The nature of work contributed by them is acknowledged as below:

Field Enumeration & Data Collection	Sri. M.M.Appukuttan SFO (Rtd) Sri. Rajendran SFO (Rtd)
Field supervision & Field coordination	Sri. S. Shaji (ACF Rtd)
Flora identification	Dr. N. Sasidharan. (Ex. KFRI Peechi)& Dr. Jomy Augustin (Prof.)
Field checking	Sri. M.S.Nair Sri. Patric Gomez
Data entry	M/s. Vignesh Graphics
Verification of data entry & Compilation	S/Sri. Patric Gomez, S. Janardhanan, N.Balakrishna Pillai and E.B. Chandra Babu
REPORT PREPARATION	
Review of literature	Sri. M.S.Nair
Result of Study	Sri. Patric Gomez
List of Plants in selected groves	Dr. N.Sasidharan and Dr. Jomy Augustin
Ecological status	Sri.M.S.Nair
Socio-Cultural aspects	Sri. Patric Gomez

All other chapters	Sri. M.S.Nair
Photographs contributed	Sri. M.S.Nair , Dr. N.Sasidharan, Dr. Jomy Augustin & Patric Gomez
Editing & Finalization of the Report	Sri. M.S. Nair (Principal Investigator of the project) Sri. Patric Gomez (Chief Coordinator of the project)

Also, I take this opportunity to sincerely acknowledge the cooperation, and valuable suggestions contributed by the Executive Committee members of IFK from time to time to accomplish this task at the best of our ability.

30-09-2022

Sri. M.S.Nair (President)
Institution of Foresters Kerala

EXECUTIVE SUMMARY

Name of Project: **A COMPREHENSIVE STUDY ON THE
SOCIO-ECONOMIC & CULTURAL ASPECTS OF
SACRED GROVES IN KERALA**

Report No.13 - ***Ernakulam District***

General

Sanctioning Authority - Addl. Principal Chief Conservator and
Chairman, KFDF Research Committee.
Implementing Agency - Institution of Foresters Kerala
Principal Investigator - M. S. NAIR
Date of Agreement - 26-02-2018
Area of Study - District. - Ernakulam
Geographical extent - 3549- sq.km
Forest area - 758.8-sq.km
No. of Taluks - Seven

PART I

Chapter I

INTRODUCTION

Objectives

- Arrive at an exhaustive list of Sacred Groves in the District.
- Detailed study of flora and fauna
- Documentation of geographical and legal details.
- Study on Socio-economic and cultural aspects
- Recording ecological status as observed & reported.

Uniqueness

- Exhaustive inventory of Sacred Groves.
- Creation of a databank on geographical and legal status of sacred groves.
- Detailed study on flora.
- Documentation of Socio-economic and Cultural aspects.
- Mapping SGs providing Id numbers.

Methodology

Described steps followed in data collection (through publicity , word of mouth etc.) and documentation including mapping.

Chapter II- Review of Literature

Definitions, past history, world scenario, Numerical, floral status and ecological status etc are given as available in the literature published earlier.

Chapter III Results of Study

Total number of SGs district wise, Taluk wise, distribution under different size categories. management details

ERNAKULAM DISTRICT

Sl. No.	Name of Taluk	No. of Sacred Groves	Extent (Cents)
1	Paravur	156	2445.5
2	Aluva	107	703.5
3	Kochi	37	448.5
4	Kanayannur	87	1092
5	Kunnathunad	193	8673
6	Kothamangalam	72	1638
7	Muvattupuzha	56	467
	Total	708	15467.5 Cents

Management- Five main categories identified-

- i. Devaswam Board.
- ii. Public trust-
- iii. Public Committee,-
- iv. Private- (- Kudumbakavu & Kudumba Trust)-

Id Numbers to Sacred Groves. (SG)

Id numbers have been provided taluk wise-

The list of all the SGs have been given serial numbers coming in each taluk and details from name, ownership up to North and East co-ordinates.

Mapping

Separate map for each taluk has been prepared showing the location and Id numbers of SGs.

Chapter IV : Composition of Vegetation

Occurrence of important species have been described and rare species seen in the SGs have been listed out noting conservation status

Trees-, Shrubs- , Climbers-.Herbs-

Chapter V: List of flora in Selected Sacred Groves

In all twenty SGs falling in the three regions low land, middle land and high land- have been inspected and prepared by an expert on Botany and Taxonomy . The important species identified are tabulated SG wise.

Chapter VI: Ecological Status

Vegetation- Plant diversity with rare Invasive species, Keystone species, Natural regeneration, nature of occurrence of species region wise,

Soil condition- Result of soil tests and analysis, soil and water conservation discussed.

Faunal significance- Useful and harmful role of bats, termites, peafowl, fish varieties etc.as could be collected with their habitats.

Chapter VII : Socio-Cultural Aspects of Sacred Groves

This study has covered the belief entertained by devotees on various deities, the rituals performed during worship, and different cultural programmes being organized in festivals. The role of Astrologers predominant in this region is pointed out. Various prominent folk arts like Mudiya, Chakiyar kooth etc are described with illustrations.

Chapter VIII: Social Dimensions of Sacred Groves

Sacred Groves falling in different regions totalling 35 numbers were selected and the social conditions in relation to the Sacred Groves have been studied. Mainly five stake holders have been identified such as, i-Local people, ii. Custodians, iii, Priest hood, iv. Shop keepers and v. younger generation. Representatives belonging to all the above categories have been contacted with suitable questionnaire and analyzed their views.

Study revealed that there is a strong network of social system centred around sacred groves built with faith on God, observance of customs, social harmony and flow of income. It is estimated that the following is the minimum effect on socio-economic condition annually.

Communal harmony and social harmony.

Development of strong trend in protection of vegetation due to fear of God/environmental benefits.

Employment-Man days -34140 ..

Total amount generated through various sources-Rs. 575 lakhs.

Other shop vendors depending on SGs for their livelihood – very few.

Chapter IX: Myth & Legends

Stories collected through booklets of SGs and the legends recorded in the book on *Temples of Malappuram district by Jayasankar* published by Census department.

Chapter X: Threats & Recommendations

Regarding threats, intention showed by a few to reduce extent by shifting deity, encroachment, disputes on ownership, dumping waste etc. are discussed with examples.

Main recommendations

- i. Awareness programmes including suggestions to prevent dumping solid waste
- ii. Arrangement for fair distribution of grant to deserving custodians,
- iii. Production of quality seedlings of selected species,
- iv. Interference by government to be cautiously done.
- v. Conducting research on ecology and carbon sequestration in Sacred Groves

PART II

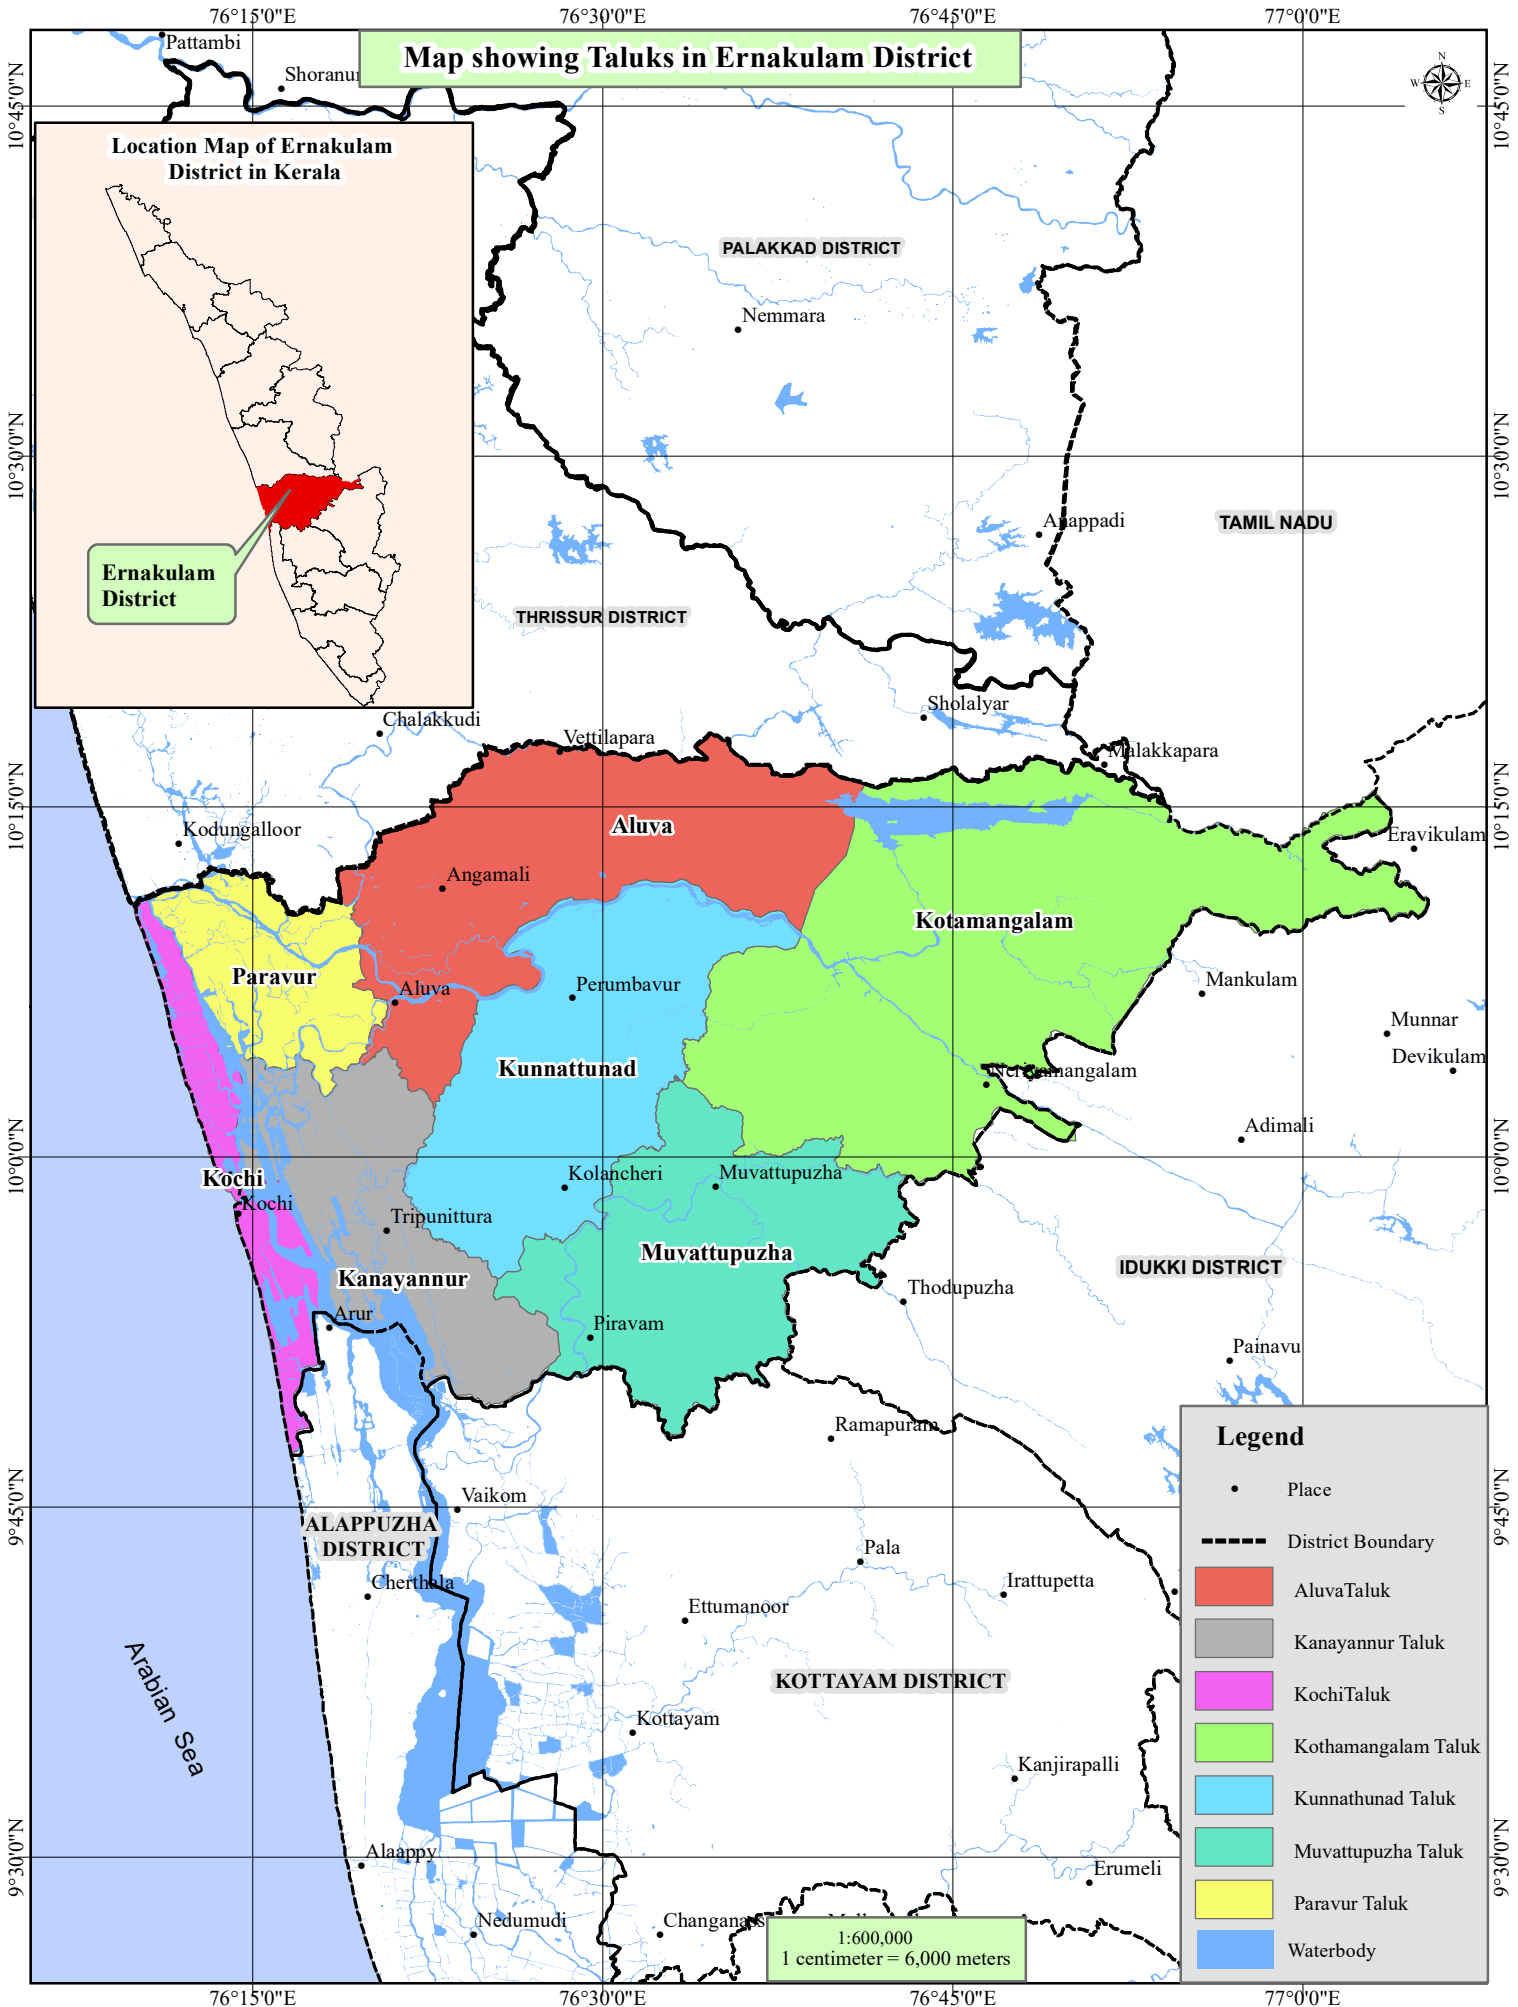

Maps of SGs with Id numbers- taluk wise.

Detailed statements on Management & Geographical details of SGs - taluk wise

CHAPTER I

INTRODUCTION

The existence of sacred groves in India dates back to ancient pre-agrarian hunter gathering era and their presence has been documented since early 1800's. Believing that trees are the abode of deities and ancestral spirits, many communities set aside sanctified areas of forest and established rules and customs to ensure their protection prohibiting felling trees, killing animals etc. The prevailing belief among devotees is that the presiding deities administer punishment to individuals or entire community in the form of diseases or crop failure if in case they violate the established customs. As a result of such restrictions and strict adherence to the accepted customs by the devotees, several endemic and endangered plant and animal species have survived in the sacred groves for so many years since. Sacred groves attain religious and holy significance all over.

The Earth Summit of 1992 emphasized the immediate need for protection and conservation of biodiversity. Following that, the approach to biodiversity conservation gained revamping image all over the world. Protection with veneration provided to these patches of forest as Sacred Groves from generations to generations all over the world is significant in the sense that the principles of bio-diversity conservation had been inbuilt in their management. In India the Biological Diversity Act enacted in 2002, stressed the need for implementing various measures for bio-diversity conservation.. In the mean while, the Kerala Forestry Project (1998-2003) stressed the need for biodiversity conservation and constituted a Biodiversity Cell in Forest Department. The Kerala Forestry Project (1998) proposed the need for long term conservation of sacred groves by taking up ecological survey and inventory of sacred groves. In addition the project provided for lump sum allocation of grants to local communities and religious groups to improve awareness, demarcation, protection and enhancement of local practices in Sacred Groves. But even after 17 years on completion of the project implementation a clear picture as to the spread of area under vegetation and the related inventory about the sacred groves was lacking. However, the present trend of Kerala Forest Department (KFD) in complying with the objectives by imbuing the theme is worthy of appreciation.

Protection and Conservation of Sacred Groves is one among the schemes and KFD is providing grant to various selected sacred groves under this scheme. For implementing such a scheme a database covering inventory with all relevant details is very essential in order to obtain financial assistance in the full measure from Central Government. Though studies have been undertaken and reports published on sacred groves of Kerala by various individuals and organizations, such reports do not cover all the relevant details and they cover

only part of some aspects, that too in incomplete form. It is in this context this project receives warm acceptance at all levels concerned.

This study is aimed at building a data base on the existence of sacred groves in Kerala. The work on Thiruvananthapuram District has been completed and report submitted in 2013. Against earlier anticipated 100 numbers of sacred groves (SG) it finally turned out to be 452. The report on Kollam district submitted in 2015 gives the list of 895 against 100 and odd anticipated earlier. In the same manner in Report No.3 on Kozhikode District submitted in June 2016 the total number of sacred groves comes to 1231 against the earlier reported figure around 100. Besides taking an inventory on the number of SGS available, information on the extent of land under vegetation, ownership, legal status, geographical location including GPS data, assigning Id number and such other important information find a place in this report. The impact of such information on these patches of vegetation which have been surviving since long and its socio-ecological scenario would amply help policy makers establish guidelines and launch schemes for conservation without interfering with the freedom of the custodians. **The absence of such information in the earlier available data base over the state qualifies this study a unique venture.**

This report is presented in two parts. Part 1 contains inventory details, study on vegetation, ecological aspects and Socio-cultural studies, along with photographs of important sacred groves and plants. Part II comprises statements consisting location, ownership, extent, management details and Id numbers computed for each sacred grove taluk wise. Maps showing the location of all the SGs Taluk wise are also included.

As already explained, this report is unique in its objectives.

Objectives

- A comprehensive inventory of sacred groves in Kozhikode District with location
- List of flora with analysis on distribution of plant species,
- Identification of important and rare plant species in detail by an expert with regard to selected sacred groves.
- Ecological status based on field observations and reported facts.
- Assigning ID numbers to all the SGs.
- Preparation of a data base on folklore and folk arts.
- Assess impact of the sacred groves in socio-economic scenario.
- Providing photographs of all important species existing in the SGs

- Mapping SGs taluk wise showing the location of SGs based on GPS readings.
- Locate the threats being confronted in conservation of sacred groves.
- Recommendations

METHODOLOGY

Area of Study

This report covers Ernakulam district. There are seven taluks such as Aluva, Kanayannur, Kochi, Kothamangalm, Kunnathunad, Muvattupuzha and Paraur. Annual rainfall is 350 cm. Mean and max. Temperature is 22^{0c} and 35.5^{0c} respectively. This area lies between Latitudes N 10⁰ 10' and 10⁰ 50' & Longitudes E 76⁰ 0' and 76⁰ 50' .

As regards soil is concerned, in most of the area soil is derived from laterite rock. In the rest of the area, it is reddish and particularly in the coastal belt sandy loam is predominant.

Culture- The district of Ernakulam is an amalgam of a hoary heritage and global growth of industry and commerce. For the outside world, Ernakulam is part of Kochi referred to in the history of Kerala as the Queen of Arabian Sea.. The densely populated Ernakulam District embodies the achievements of the Kerala State in literacy, industry, trade and commerce. With an inclusive culture, relatively high per capita income and an unstoppable interest of the people in updating themselves of the political, economic, social and cultural happenings in the national and international spheres,

Collection of available data

The probable list of sacred groves has been collected through office records, publicity in the press and word of mouth as was done in earlier cases. In this district only one team was available headed by a Retired Forester. Hence it took quite a long time to complete the work. Recording details also was done in the same format as in previous cases along with GPS Readings. Supervision was done by one Retired ACF and random checking, by senior members from Head Office. Taxonomist covered 21 sacred groves to prepare the detailed list and frequency of plant species. Regarding ecological status a specialist was engaged to know the availability of part of the fauna like fish and birds. The legal status, address of custodian and extent are gathered from persons holding possession of the SGs based on available records and the information passed on by them. The extent of each SG is assessed by the field team who have experience in judging the area and utmost care has been taken to see that the extent is not exaggerated at any cost. Ownership and Sy. No are recorded as provided by the

custodian or the representative available in the grove and not always based on documents. Wherever documents are made available that were also considered.

Format for recording data- A format was designed for the collection of data while visiting a sacred grove which proposed to collect information on name of SG, location, name and address of custodian, extent, Sy. No, Village and similar geographical details. Further, details on inspection would carry the vegetation, fauna, legal status, information of presiding deity, temples attached, a brief note on the route to reach the SG from a known place and similar essential facts.

Legal status was looked into to classify the sacred groves into the following categories as could be verified from reliable records or information. (i) Managed by Devaswam Board (ii) Under Public Trust, and Under Local Committee (iii) Private (includes family trust or Family (Kudumbam) ownership). More details about these will appear in the chapter on Sociological Dimensions.

Documentation of Flora and Fauna--. Generally, the field team is conversant with the identification of the species and common shrubs. But they have also taken the help of persons conversant with the identification of uncommon shrubs and herbs including medicinal plants. In addition, services of experts in Botany and Taxonomy also has been utilized to arrive at the wealth of flora in selected sacred groves.

CHAPTER II

REVIEW OF LITERATURE

There are plenty of literature authored by various scholars such as Gaikward, Oliver Kind, Dr. Raviprasad Rao, Muhamed Jafer Pilot & Radhakrishnan, Mohan C.N & Ganga Prasad, Unnikrishnan, U. M. Unnikrishna and others on the character and status of sacred groves in general which constitute the basis of this chapter partly. In addition, there are various articles on SGs in other countries available by surfing internet. Part of those are also included in this.

The sacred Groves came into existence thousands of years ago and in general they are dedicated by local communities to their ancestral spirits or deities. They have been defined by many authors like those above and all the definitions carry more or less the same meaning. The following are the views that emerge out of their contributions.

According to them Sacred Groves (SG) are patches of vegetation or group of trees protected by the local people through religious and cultural practices evolved to minimize destruction. Sacred groves, the community-based repositories of biological diversity, are segments of landscapes typically covering a patch of vegetation with perennial water resources. They are patches of wilderness conserved owing to their perceived importance attached to a village deity. Sacred grove is an age-old tradition where a patch of forest is dedicated to local deities and none is allowed to cut plants or to harm animals or do harm to any form of life. Sacred groves are community-based monuments of biological diversity.

Global Scenario

Sacred Groves (SG) are distributed across the globe and diverse cultures recognize them in different ways encoding various rules for their protection. Sacred groves associated with religious beliefs were there in many countries from time immemorial. Sacred groves have been reported from many countries like Mexico, Ghana, Nigeria, China, Syria, Europe and America.

The Greek and Roman landscapes were dotted with many sacred places which contain groves of trees and water springs. Groves were in existence in Greece and Rome long back. The most famous sacred grove in Greece was Oak Grove at **Dodona**. Outside the walls of Athens, the site of the Academy was a sacred grove of olive trees.

Resources from the groves were used for religious purposes. Animals like goats and deer were offered to appease the deity. Trees in the groves could be used for

building temple. Wood from sacred trees was believed to have magical powers when fashioned into statues of Gods. This kind of multiple use relaxing strict measures on conservation caused decline of SGs in some parts of Europe. One great **Druidic groves in south Gaul (Rome) was cleared by Caesar's troops** in an attempt to remove spiritual powers inherent in the grove. There was a grove in front of the **church in Weissenbach an der Triesting**. (picture *Plate I*) In Europe sacred groves survived in the Baltic states longer than in other parts. The sacred grove island **Estonia** is the one. (See picture *Plate-I*)

In the **Caucasus Mountains** (Russia) each community had its own sacred grove. They worshipped these as sanctuaries built among age old trees which were never to be cut (see picture—*PLATE-- II*).

In Tuna a southern province in **China**, the inhabitants did not dare to touch the native mountain forest because of their fear on wrath of God.

In Africa, among the Kikuyu ,groves of *Migumu* trees are considered sacred and those trees were not to be cut. In these sacred groves, sheep and goats were sacrificed and prayers offered for rain or fine weather or for curing diseases among people. In Kenya, *Kaya* a sacred forest considered to be an intrinsic source of ritual power and origin of cultural identity . It is also a place of prayer for members of a particular ethnic group-Mijikenda people. The flora was used solely for collection of medicinal plants. Cutting and clearing trees were not permitted. In **Nigeria the Osum-Osobgo sacred grove** containing dense forests is dedicated to fertility God in Yoruba mythology and is dotted with shrines and sculptures . This grove was designated as a **UNESO World Heritage Site** in 2005.(see picture- *PLATE-II*)

In **Japan** the Seifa- Utaki contains a sacred grove, with rare indigenous trees like *Kubanoki* (a kind of Palm) and *Yubunikkei*(*Cinnamomum japonicum*) This is UNESCO World Heritage Site of 2003.

A grove near **Leona** all the way down a mountain side up to sea was dedicated to the goddess Artemis at the instance of Alexander the Great. Artemis was considered to be the protector of animals and plants.

In **America-The Bohemian Grove located in California** is a privately owned sacred grove and in mid July each year they perform symbolic rituals such as Cremation of Care.

Attitude by different Religions in the world

Due to the rise in dogmatic religions like Christianity and Islam, which advocated faith in one God, the tradition of maintaining sacred groves and sacred trees did not get an unconditional flow of support though sacred groves exist in many countries in some form or other among those religions. We can still get lot of instances to show that this attachment to trees coupled with spiritual beliefs exist among different religions also other than Hinduism.

In the kingdom of Shower in Arabia, tree worship was prevalent in 1860 for getting rain. Muslim Persians invoke the spirits supposed to dwell in certain trees by hanging on the branches, pieces of garments during some ceremonial occasions.

In Indonesia *Ficus benghalensis* is considered sacred. They believed the existence of holy spirits in the tree which would ensure availability of clean water.

In Parish Church of Weissenbach Treisting in Lower Austria, Europe, a grove exists in front of the church. In Syria there is a grove sacred dedicated to Adonis at Afqa.

Buddha himself gained realization and enlightenment under a Pipal tree. Buddha is reported to have been born in a sacred grove-Lumbini full of Sal trees.(Gadgil 1985)

In all parts of Africa, various tribes consider different types of groves as sacred. In West Asia, Babylonians and Assyrians had planted sacred groves. Palm forest with altar has been reported from Arabia. Sacred Oak grove was present in Asia Minor. Sacred mountains and lakes are present in Madagascar. Many Siberian people honored sacred groves. Village groves are present in Korea. In Japan, Shinto shrines, as a rule, are surrounded by trees. Buddhist temples in Japan and China have tree gardens. Buddhist monasteries and temples of Thailand have sacred groves. Sacred groves are present in Nepal and Sri Lanka. In America both pre-Columbian people and the settlers maintained sacred groves. In San Francisco AIDS National Memorial Grove (1996) was started in memory of those who died by Aids.(CDS)

Indian scenario

In India sacred groves are existing in a wide range of ecological situations from estuaries to mountain localities. Gadgil and Vartak (1976) record that the important regions with sacred groves are the North Eastern Himalayas (Khasi – Garo hills) , Western Ghats, Aravalli Hills of Rajasthan , Chands and Baster area in Central India. In addition the coastal and mid-land areas of Kerala are also important where the sacred groves are abundant.

Of course in India the major religion that holds and protects sacred groves is Hinduism, having several living and non-living elements of nature as objects of worship. The general belief that sacred groves are maintained by Hindu community only is not fully correct. Other communities also have shown faith in the sacred trees.

A little Sal forest in Gorakhpur is maintained by a Muslim saint “Main Sahib” . Nothing was allowed to be cut except for lighting sacred fire.

In Kolhapur district there exists a small sacred grove on the land of a Muslim peasant. This land was purchased by him from a Brahmin priest in 1962. The Muslim peasant observes “agrosaat” and “diwalsaat” (pre-sowing and post sowing ceremonies) at this sacred grove along with adjoining Hindu peasants.

In Murshidabad district (Raghnathgunj town in West Bengal), in a Mazar-a pir- is located amidst a grove . On the top of the grave three trees –neem, mahakal, and bel are there which are worshiped by Hindus.

In the heart of Midnapur city, a sacred grove is dedicated to a pir called Hazrat Balak Shahid Rehmatullah Elachi, who died a few centuries back. There is a sacred well inside known as “Sheikh Kuia”. People irrespective of cast or religion fetch water from this well as it is believed to have powers to cure diseases.

In Midnapur itself there is another big sacred grove dedicated to a pir called Baro Huzur and the SG is known as “Tapovan”. This is located at Istreegunj on the western fringe extending over three acres. Entry is restricted here. Wearing shoes is not allowed. Here also there is a sacred pond from where water is considered to have power to cure diseases.

In north Kerala, particularly in Kannur and Kasaragod districts Muslim community is seen associating in the affairs of some sacred groves mainly for performing Teyyam art.

If we take the case of *Sabarimala Poonkavanam* a typical and extensive sacred grove of Lord Ayyappa, holds the legendary association of “Vaver Swamy” a Muslim, at Erumely which is still in vogue. The facts narrated above stands to reason that sacred grove is not alien to communities other than Hindu.

Global Faith on Sacred Plants & Animals

Protection of plants

Ancient religions all over the world never differentiated soul of human beings fashioning statues and soul of animal. During those days itself plants were also considered as living beings. It is generally felt that India is the typical country where this approach to plants and animals relating to sacred sites is keenly felt and practiced.

When the global position is examined in more details , the revelation throws light on many similarities in this aspect.

Safeguarding the plant wealth in sacred sites is the motto everywhere by attaching spiritual powers or benefits that may accrue or utility of timber for carving and the like. How the trees in mountains and heritage sites in Greece, Russia, Africa, America etc. are being revered has already been explained in the above paragraphs. In all these cases invariably destroying trees is considered as taboo.

Sacrifice of animals in rituals

In some parts of the world sacrificing animals as a ritual to appease God do exist. This is being differently adopted in India also. In India in view of the various legislations on animal protection, the very old practice of making animal sacrifice is usually replaced by resorting to cutting some vegetable- symbolically.

But in some Muslim dominated countries this is not a taboo during Bakrid. Some of the other countries are, France, Germany, Greece, Spain etc. Among these countries the only option for changes is regarding stunning the animal. Probably by taking the queue from the above cases, in India also there are judgements supporting animal sacrifice as has appeared in the press in accordance with religious requirements. Provision 28 Of the Prevention of Cruelty to Animal Act -1960, - “Nothing contained in this Act shall render it an offence to kill an animal in the manner ritual slaughter. required by religion of any community, theoretically leaving open the question of unstunned ritual slaughter. There was a Supreme Court ruling in 2017 as appeared in the press to the effect that – “No ban on animal sacrifice for religious purposes-Telangana” .It is seen that animal sacrifice, mainly goat or poultry is now being performed in a sacred grove Ekalavyam kavu in Chittur tauk of Palakkad District.

In Kerala a Division Bench of High Court have upheld the ban on animal sacrifice in their judgement on 16-06-2020 as per Kerala Animals and Bird sacrifices prohibition Act-1968. An appeal against this order is now pending before the Supreme Court.

Offering Alcohol in rituals as oblation

In some sacred groves the God or Goddesses of Sakteya nature (non-virtuous) like Bhadrakali, Kuruman,or Duryadhanan or Karnnan are being worshipped. In such cases, non-Brahmins such as SC community, Mala Arayans etc are maintaining the sacred grove or temple out of their ardent belief that such deities are more powerful like warriors in helping and protected the less privileged folk.. Here they serve Toddy, or hard liquor as the offering during the festival. Such cases are seen in Duryodhana Kavu, (Muthappan) in kollam, Dussasana kavu in Kanjirappally and Valliamkavu in Peermade taluk.

Number of Sacred Groves

The total number of sacred groves in any state or region estimated and reported is not based on any authentic study. All the reports on the number of SGs go by rough estimation as can be seen below. The rough estimate of the number of sacred groves in India is around 14000 with an extent of about 55000 hectares . (Nalinakshan P.K – 2004). And more than one lakh (Malhotra-198). These reports do not state the basis of these figures and exact source. However coming to the case of Kerala, reports on estimation is varying. Though many authors have given the total number or list of sacred groves district wise none of them claim that they are exhaustive. Some of the estimations for the state of Kerala-are as below.

1. Only less than 1000 .. (Mohan CN and Ganga Prasad.)
2. 15000-(T-C Area)-(Ward and Conner -1927)
3. 2000- (Rajendra Prasad -1995).

(Source-NATIONAL WORKSHOP ON SACRED GROVES 2004-KERALA)-Now it is becoming evident that these figures are not reliable.

Flora

The vegetation in sacred groves is generally immensely rich in diversity of species depending on the conditions of habitat prevailing in various regions.. Studies made so far made till 2004 listed out 805 species of flowering and non-flowering plants belonging to 121 families, comprising 673 di-cotyledons belonging to 95 families and 126 monocotyledons belonging to 20families (Unni P.N. & Anupama -2004). Unnikrishnan (1990,1995) has documented more than 32 species of plants that are endemic to Western Ghats in the sacred groves.

Majority of the species belong to families such as Annonaceae, Menispermaceae, Capparidaceae, Malvaceae, Meliaceae, Vitaceae, Fabaceae, Anacardiaceae, Rubiaceae etc.

Unni. P.N and Anupama have also provided a table listing the above 805 species in their paper ‘Conservation of sacred groves of Kerala: Need and strategies’ presented at the National Workshop on Sacred Groves held in September 2004 at Kozhikode. According to Gadgil (1976), sacred groves are the treasure of rare and endemic species. Many workers supported this view. For example, analysis of phytogeographical elements of sacred groves of Kerala indicates that 721 species recorded from the sacred groves 154 are endemic to Western Ghats and 33% of them are trees (Induchoodam 1998)-{ Chandrasekhara u.m.2004}

.In certain regions with the prevailing micro climate and edaphic features plant formations assume different composition from mangroves to rain forests. Mangroves are found along estuaries and fringes of back waters.

Similarly, fauna in the sacred groves have been listed out which contain Amphibians-3, reptiles 10, and birds 164. This include 25 species of birds that breed in sacred groves. But according to another survey (Unnikrishnan) among 90 species of birds documented in certain sacred groves 34 were found breeding in sacred groves. Among these 90 species, 40 are typical forest species and 20 are migrants. The Sacred groves are the last shelter of the common fauna including a variety of insects, reptiles, mammals, birds and micro-organisms. Among the animals, a few are enlisted as threatened in India such as the fresh water and terrestrial tortoises, python, monitor lizard, mongoose, palm civet, Nilgiri Languor, Slender Loris, several amphibians, reptiles, and insects. The Malabar large spotted civet presumed to be extinct is reported last from some of the groves in Malabar. Birds, including a few migratory ones, select groves for nesting and breeding. A phenomenon known as overwintering (staying without going back) among winter visitors of birds is also noticed in some of these groves of Kerala. (Mohanan C.N. to Ganga Prasad A-2004).

The major fauna of the groves comprise of snakes (cobra, viper and rat snake) water hen, toddy cat and mongoose. The pond contains various fishes, tortoise, frog and water snake. (Kannan C.S. Warriar, Kunhi Kannan C and Gunasekaran T-2004).

The birds and bats find their natural nesting places in the sacred groves. They, in addition to their scavenger role check the insect and pest population. The bird droppings rich in phosphorous replenish the phosphorus deficient soil of the region. Snake and mongoose find their home in sacred groves. The snake controls the rodent population, which if left unchecked will destroy the crops of the locality. The snake population is kept under check by the mongoose. Insect fauna, particularly the bees make their hives in sacred groves and facilitate the cross pollination of many plants species of the locality. (U.M.Chandrashekara-2004)

Ecological functions

According to Rajendraprasad (1995), sacred groves show high porosity and low bulk density compared to the soils of nearby areas. He also observed the thick litter covers and channels created by soil micro-fauna together enhanced the water retention, root system development, gaseous exchange and heat conductance. The role of sacred groves as micro-watershed in local area has been recognized by many workers. (Chandrashekara U.M.-2004)

As an ecosystem, they help in soil, water and nutrient conservation and the ponds and streams adjacent to these groves are perennial water sources, which adequately explain their hydrological significance, though not evidenced through results of scientific investigation. (Unni P.N.& Anupama C-2004)

CHAPTER III

RESULT OF STUDY

The study reveals that there are in all 708 sacred groves in this district. Out of this almost 39 % are of and below 5 cents in extent and those between 5-10 cents , 36 %. There are 148 SGs which are comparatively larger ones and those above one Acre in extent are nine-which are mostly seen in Kunnathunad and Kothamangalam taluks..

CHAPTER IV

COMPOSITION OF VEGETATION

The vegetation in these sacred groves has been identified species wise by the field team and recorded as such in the field format. In addition selected SGs in all the taluks have been inspected by an Expert on Flora who has listed out the complete list of species coming under trees, shrubs, climbers, herbs etc . In this manner 20 SGs have been enumerated and the lists in respect of each such SGs have been given in this chapter. The study reveals that most of these SGs contain as much as 12 to 24 tree species, 10 to 22 shrubs and 25 to 34 climbers. Rare and threatened species like *Myristica malabarica*, *Gynecranthera farquhariana*, *Syzygium travancoricum* etc have been listed out. The families such as Euphorbiaceae, Lauraceae, Fabaceae, Rubiaceae and Apocynaceae are very well represented.

TREES

Among the dominant trees most common are *Vateria indica*, *Holigarna arnotiana*, *Calophyllum calaba*, and *Hopea ponga*. occur together in many SGs exhibiting an affinity towards each other. The vegetation in Iringole kavu and Ponnumkudam kavu which are very large and have thick vegetation. The dominant tree species are, *Hopea ponga*, *Ficus benghalensis*, *Plumeria rubra*, *Strychnos nuxvomica* etc. Large climber *Raphidophora pertusa*, small evergreen tree *Naringi crenulata*, rare medicinal plant *Morinda umbulata* are seen in Iringole kavu. Orchids such as *Acampe praemorsa* and *Bulbophyllum neilgherrense* are also seen.

Ficus trees

These trees are mostly keystone species in sacred groves. The flowers provide a safe haven for wasps which help in the pollination. There are quite a number of *Ficus* species seen in these sacred groves.

Many species though common are important having medicinal value. Some of them are given below.

TREES

Climbers

<i>Holigarna arnotiana</i>	<i>Smilax</i>
<i>Alstonia scholaris</i>	<i>Symnema sylvestre</i>
<i>Holarrhena pubescens</i>	<i>Hemidesmis indica</i>

Taberniae montana alternifolia	Abrus prectorius
Albizia odoratissima	Ziziphus oenoplia
Oliea dioica	
Barringtonia racemosa	
SHURBS	HERBS
Solanum violaceum	Scoparia dulcis
Allophylus combe	Spermacoco latifolia.
Chassalia curviflora	Biophyta sensitivum
Memecylon ambullatum	Leucas aspera
Urena lobata	Desmodium triflorum
	Tridax porcumbens
	Phalopsis imbricate

The important plants normally seen in each sacred grove have been recorded during inventory. Detailed study of vegetation was carried out in selected groves by Botany experts the details of which appear in the following chapter.

CHAPTER V

LIST OF PLANTS IN SELECTED SACRED GROVES

1. Aryavalli Kavu, Keezhillam, Rayamangalam Village, Kunnathunad Taluk

Sl. No.	Scientific name	Family	Local name
	TREES		
1	Adenanthera pavonina	Leguminosae	Manchadi
2	Ailanthus triphysa	Simaroubaceae	Matti, Perumaram
3	Antiaris toxicaria	Moraceae	Maravuri
4	Alstonia scholaris	Apocynaceae	Ezhilam pala
5	Artocarpus hirsutus	Moraceae	Aanjily
6	Caryota urens	Arecaceae	Choondappana, Olattipana
7	Celtis timorensis	Ulmaceae	Oma
8	Ficus benghalensis	Moraceae	Peral
9	Ficus exasperata	Moraceae	Therakam
10	Ficus hispida	Moraceae	Parakam
11	Ficus religiosa	Moraceae	Arayal
12	Holigarna arnottiana	Anacardiaceae	Cheru
13	Lannea coromandelica	Anacardiaceae	Karasu, Udhi
14	Macaranga peltata	Euphorbiaceae	Vatta, Thodukanni
15	Mallotus philippensis	Euphorbiaceae	Sindooramaram, Kurangumanjal
16	Mangifera indica	Anacardiaceae	Mavu
17	Melicope lunu-ankenda (Euodia lunu-ankenda)	Rutaceae	Kambili, Kanala
18	Mimusops elengi	Sapotaceae	Ilengi
19	Olea dioica	Oleaceae	Edala
20	Pterospermum reticulatum	Sterculiaceae	Malayuram
21	Saraca asoca	Leguminosae	Ashokam
22	Sterculia guttata	Sterculiaceae	Kaavalam
23	Streblus asper	Moraceae	Paruvamaram
24	Strychnos nux-vomica	Loganiaceae	Kanjiram
25	Tetrameles nudiflora	Datisceae	Cheeni maram
26	Vateria indica	Dipterocarpaceae	Vellappine
	CLIMBERS		
1	Acacia caesia	Leguminosae	Incha
2	Acacia torta	Leguminosae	Pei-incha, Kakkincha
3	Anamirta cocculus	Menispermaceae	Pollakai
4	Calycopteris floribunda	Combretaceae	Pullani
5	Bauhinia anguina	Leguminosae	Paambuvalli
6	Centrosema molle	Leguminosae	Kaattupayar
7	Combretum latifolium	Combretaceae	Purakkodi
8	Cyclea peltata	Menispermaceae	Padakizhangu
9	Cosmostigma racemosum	Asclepiadaceae	Kakkakodi
10	Dioscorea sp.	Dioscoreaceae	
11	Ichnocarpus frutescens	Apocynaceae	Parvalli
12	Jasminum coarctatum	Oleaceae	Kaattumulla

13	<i>Luffa cylindrica</i>	Cucurbitaceae	Peechanga
14	<i>Mikania micrantha</i>	Asteraceae	Dhirastrapaccha
15	<i>Merremia umbellata</i>	Convolvulaceae	Koravalli
16	<i>Passiflora foetida</i>	Passifloraceae	Bonchikkaya, Poodappazham
17	<i>Pothos scandens</i>	Araceae	Varivalli, Paruvakkodi
18	<i>Mucuna pruriens</i>	Leguminosae	Naikurana
19	<i>Quisqualis indica</i>	Combretaceae	Kulamaringi, Thookuchethi
20	<i>Smilax zeylanica</i>	Smilacaceae	Kareelanchi
21	<i>Spatholobus parviflorus</i>	Leguminosae	Adambuvalli
22	<i>Ziziphus eonopia</i>	Rhamnaceae	Cheruthodali
SHRUBS			
1	<i>Antidesma acidum</i>	Euphorbiaceae	Asaripuli
2	<i>Caesalpinia mimosoides</i>	Leguminosae	Poomullu
3	<i>Chassalia curviflora</i> var. <i>ophioxyloides</i>	Rubiaceae	Yamari
4	<i>Chromolaena odorata</i>	Asteraceae	Communistpatcha
5	<i>Clerodendrum infortunatum</i>	Verbenaceae	Peruvelam
6	<i>Glycosmis pentaphylla</i>	Rutaceae	Paanal
7	<i>Grewia microcos</i>	Tiliaceae	Kottakka
8	<i>Helicteres isora</i>	Sterculiaceae	Idampiri-valampiri
9	<i>Hibiscus hispidissimus</i>	Malvaceae	Kaalapoo, Panachan
10	<i>Hibiscus rosa-sinensis</i>	Malvaceae	Chemparathi
11	<i>Ixora coccinea</i>	Rubiaceae	Chuvanna-thetchi
12	<i>Ixora javanica</i>	Rubiaceae	Ashoka-thetchi
13	<i>Jatropha gossypifolia</i>	Euphorbiaceae	Chuvanna-kadalavanakku
14	<i>Leea indica</i>	Leeaceae	Njellu
15	<i>Mussaenda frondosa</i>	Rubiaceae	Vellila
16	<i>Phyllanthus reticulatus</i>	Euphorbiaceae	Neeroli
17	<i>Tabernaemontana</i> <i>divaricata</i>	Apocynaceae	Nandhiyarvattom
18	<i>Tabernaemontana heyneana</i>	Apocynaceae	Kundalappala, Kunninpala
HERBS			
1	<i>Allmania nodiflora</i>	Amaranthaceae	Kuppacheera
2	<i>Asystasia gangetica</i>	Acanthaceae	Upputhali
3	<i>Caladium bicolor</i>	Araceae	Pullichembu
4	<i>Curculigo orchioides</i>	Hypoxidaceae	Nilappana
5	<i>Ocimum tenuiflorum</i>	Lamiaceae	Thulasi, Krishnathulasi
6	<i>Ischaemum idicum</i>	Poaceae	
7	<i>Mimosa pudica</i>	Leguminosae	Thottavadi
8	<i>Scleria parvula</i>	Cyperaceae	
9	<i>Stachytarpheta urticifolia</i>	Verbenaceae	Kadapananthu

2. Thottam Illam Kavu, Eramallur Village Kothamangalam Taluk

Sl. No.	Scientific name	Family	Local name

Note: The vegetation of the sacred grove is dense with several species which are common in evergreen forest and some of the tree species in the moist deciduous forest. The dominant tree species are *Artocarpus hirsutus*, *Hopea ponga*, *Vateria indica*, *Strombosia ceylanica*, *Hopea parviflora*, *Polyalthia fragrans*, *Mesua ferrea* and *Holigarna arnottiana*. The climbers frequently found are *Gnetum edule*, *Cissus latifolia*, *Combretum latifolium*, *Dalbergia horrida* and *Sarcostigma kleinii*.

5. Ponnankudam Temple Kavu, Kanayannur Taluk

Sl. No.	Scientific name	Family	Local name
	TREES		
1	<i>Acronychia pedunculata</i>	Rutaceae	Verukutheeni
2	<i>Actinodaphne malabarica</i>	Lauraceae	Eeyoli
3	<i>Adenanthera pavonina</i>	Leguminosae	Manchadi
4	<i>Aegle marmelos</i>	Rutaceae	Koovalam
5	<i>Aglaia elaeagnoidea</i>	Meliaceae	Njazhal
6	<i>Anacardium occidentale</i>	Anacardiaceae	Kasumavu, Cashew
7	<i>Antiaris toxicaria</i>	Moraceae	Maravuri
8	<i>Aporosa bourdillonii</i>	Euphorbiaceae

Note: The vegetation of the Sacred grove is very dense with trees, climbers and shrubs. The dominant trees are *Vateria indica*, *Syzygium cumini*, *Holigarna arnottiana*, *Hopea ponga* and *Hydnocarpus pentandra*. The dominant climbers are *Anamirta cocculus*, *Calamus rotang*, *Combretum latifolium*, *Gnetum edule* and *Flagellaria indica*. Two trees of the endangered *Syzygium travancoricum* are growing in this grove.

CHAPTER VI

ECOLOGICAL STATUS.

Ecological condition in a sacred grove revolves around its relationship and influence imparted on various components like microclimate, soil and moisture retention, soil nutrients, nature of vegetation and other life forms that associate. The vegetation as well as the biological setup in a sacred grove is normally fully protected from human interference through customary taboos and sanctions with cultural and ecological implications. In such a typical condition there can be immense activity among and between all living organisms providing plenty of resources for research on some of the aspects not seen studied hitherto. In this report there is only limited scope to undertake a study on this vast subject, and this chapter is confined to vegetation, soil conditions, faunal significance and water conservation as could be observed and understood.

Vegetation

The composition of vegetation exhibit a different pattern in which the number of tree species are much more than other habit forms unlike the northern or southern regions. Among trees about six species of *Ficus* are represented. *Ficus* provide a safe haven for wasps, bees and other insects. As different species of *Ficus* flower during different periods the birds and insects largely converge on such trees. There are other species such as *Calophyllum calaba* and *Pterospermum reticulatum* the fruits and some parts are liked by birds and animals. Iringole kavu and Ponnakudam Bhagawathi Kshetra kavu support quite a number of medicinal plants.

Keystone species

Apart from direct benefits of biodiversity conservation, there are indirect benefits which flow from sacred groves through ecosystem functions. Some species, though present in small numbers, play very important role by their unique abilities such as nitrogen fixation and attracting many birds, animals etc. and help maintaining life forms in plenty. They are known as keystone species. These species have disproportionate large effect on other species in a community. Law (2002) tried to identify keystone species in two SGs based on following parameters.

Once such species are removed from an ecosystem it may create dramatic changes in the rest of the community. Enough studies have not been made on this aspect in respect of the SGs in Kerala. In Tamil Nadu *Ficus religiosa* and *F. benghalensis* - known as strangler figs, are considered to be Keystone species. These species have aggressive growth habit ensuring

their regeneration and survival. They bear pulpy small fruits during dry summer when most of the other species do not. Hence they attract frugivorous birds, a few mammals and reptiles and several species of insects. Many pollinators and seed dispersers are attracted to promote regeneration in the plant community. In many of the SGs Ficus species are present. Another attraction is that the different species of Ficus bear fruits in different seasons also. The strong winding roots of Ficus prevent soil erosion. It is because of these influences on other community these species are called keystone species. There can be more such species if studies are taken up in this direction.

Taking into consideration the essential qualities of keystone species the following species seen in these SGs are suggested for consideration and study.

i. *Vateria indica* (Dipterocarpaceae). This is a shade bearer having no problems in regeneration. This has profuse seeding habit. It occupies the canopy in a spreading manner and flowers during January-March.

ii. *Alstonia scholaris* This is almost very common in the SGs. It's regeneration status is excellent. Most of the time it is in flowers or fruits. It is attracted by many birds and mammals

iii. *Aphanamixis polystachya* (Meliaceae)-This tree called *chemmaram* is liked by birds and animals and produces plenty of fruits.. It is one among the large trees where ever found and grows in almost all types of soils. Bark has medicinal value and used in treatment of liver, tumors, abdominal complaints etc. Seed oil also has medicinal value..

Regeneration

The species composition of trees in sacred groves consists of light demanders, shade bearers and shade tolerant. Seedlings of species, for which securing light condition is less pronounced, may come up or compete with the seedlings of top canopy species. As the top canopy trees of varying growth requirements survive well, their regeneration under less favourable conditions particularly when the light condition is restricted, is a matter of study. Regeneration of shade bearing and shade tolerant species do come up, but it persists for long periods in whippy form till favourable light conditions set in. These seedlings survive if soil conditions are favourable and root competition is less provided they could build up reasonable level of root stock. It is by keeping these basic principles in mind the flora of the sacred groves have been examined. However, in these SGs the existence of number of various tree species stand to reason that regeneration and subsequent establishment of the seedlings is assured. This may be due to the tolerance level of these species and low soil acidity.

Iringol Kavuu-- Perumbavur - Kerala

Mupathadam kavu

Water body at Iringole Kav

Kallil Bhagavathy temple kavu

. Natural regeneration is generally good in the case of Anjily (*Artocarpus hirsutus*), Manchady (*Adanenthera pavonina*), Charu (*Holigarna arnottiana*), Marotty (*Hydnocarpus pentandra*), etc. which are common in almost all the sacred groves. Regeneration in the form of root suckers is also noticed in the case of *Strychnos nux-vomica* and *Carallia brachiata*. Natural regeneration is good in respect of *Aglaia elaeagnoidea* where the soil is strongly acidic and in respect of *Aphanamixis polystachya*, and *Olea dioica* it is good when the soil is less acidic.

Saraca asoca (Ashokam) is a shade loving tree and is considered to be one of the species in Sacred Groves. Besides regeneration from seeds, it produces coppice shoots. This is seen more common than in southern regions. But such profuse regeneration is not seen in SGs in this area. It is understood from literature that there are chances for pods of *Saraca* getting infected by pests before they become ripe to disperse mature seeds. Some of the species though shade tolerant when young need overhead light to grow well after they reach sapling stage. *Artocarpus hirsuta* and *Alstonia scholaris* behave this manner.

There are many medicinal plants documented by study groups as below. Rare orchids such as *Acampe praemorsa* and *Bulbophyllum neilgherrense* are identified in this area- Iringolekavu. *Morinda umbellata*, *Remustatia vivipara*, *Cyathula prostrata*, *Ipomoea sepiarea* and *I. digitate*.

Soil Condition

The soil is generally less acidic to medium in areas it is sandy loam as seen from MAM Aap of Agricultural department. Only in very few areas it is latritic. As is seen from the above, soil is medium in all the areas including in those outside SG. There is only slight variation among other parameters. Level of organic carbon is naturally more than that outside sites. An overall picture shows that the soil is generally medium acidic and organic carbon is medium in SGs. The existence species such as *Archyranthis aspera*, *Costus speciosus* and the like in plenty shows low acidity. In strongly acidic areas *Curcilio orchioides* (*nilappana*) and *Solanum idicum* are seen. Sandy soil with clayey loam is rare and *Aerva lanata* is noticed in such areas.. Almost same is the case with phosphorus and potassium. It can be well taken that acidity in soil in these sacred groves is at medium level and as could be seen most of the common species also exhibit same soil requirements as reported under studies made by scientific community.

Soil conservation

Rapid litter decomposition and the root mat development with plenty of fine roots on the surface layer of the soil support large above ground biomass. Many micro organisms, invertebrates, fungi etc flourish. Root mat prevents the nutrients from leaching out. This is

visible in many SGs when visited soon after rainy season. The spreading net work of large trees prevents to a great extent soil being washed away.

Water conservation

The existence of ponds in the sacred groves of Ernakulam is conspicuous by their scarcity. One reason is that majority of the SGs are small in size. The underlying structure of the geological layers may not be impermeable to hold water percolating through the sandy soil. Of course, some of the large SGs having more than an acre do have ponds as could be seen which are dug. Only about nine percent of the grooves have natural ponds.

Faunal significance

The sacred grooves harbour numerous birds, butter flies and bats apart from primates and small mammals (Chandran, 1993). The situation with less number of ponds affects the existence of amphibian. The animals found are those which nested there in like snakes, frogs, tortoise, lizards etc. and those visit the site for food and temporary shelter like bats. A clear study on this fauna would involve long period of periodical observation by experts, not to speak of the cost. In this report the study team noted the animals seen directly and also gathered information from the custodians or local people and also available literature specific to such cases. Bats, small mammals, civets, monitor lizard, monkeys and Peacock are the animals very frequently visiting these SGs.

Bats

The bats visiting the SGs fall under the category of fruit bats. Their presence is not noticed so much as seen in other districts. Even if they are seen, no damage to trees is reported. The availability of fruits being less and concentration of climbers preclude their presence.

Peacock

Peacock visits some of the SGs finding favourable conditions of food. It feeds on plant parts, insects, white ants etc. Also it takes plenty of water. It can devour even snakes. It scratches termite mound in sacred groves and eat the ants coming out. Pea fowl is reported from many of the SGs. But they are mostly on the move. They prefer SGs adjoining paddy fields. Local information is that they suddenly appear in the morning or evenings soon after rain subsides. Sacred groves with light canopy and bushy undergrowth or tall grass are stated to be their favorite. Their way of foraging make the surroundings healthy. They feed on lizards, rodents, and even small snakes. They avoid flying but do fly to tall trees for roosting. By virtue of their iridescent bluish green plumage and beautiful large tail they are noticed

easily by people. They escape from falling victim to the hunters as long as they are in the vicinity of sacred groves.

Large Sacred Groves have a good number of birds. For example in Ponnakudam Bhagavahi Kshetrakavu nearly 60 bird species have been identified by experts and their list is displayed in the grove itself. Some of them are,

Ashy Drongo.-“*Kakkathamburan*”

They are dark grey in colour with long tail and short legs. They are insectivorous. They forage by catching flying insects. Also, they imitate calls of other birds.

Oriental magpie robin (male)-“Mannathi pullu”

Female are greyish black. They nest in tree hollows. Female is involved in nest building. Female alone incubate eggs.

Redwhiskered bulbul (“*Erattathalachi*”)

Has tall pointed black crest. They are more often heard than seen. They aid in dispersal of seeds. Feed on fruits, insects and nector.

All the above three birds are very common in Ponnakudam Kavu.

Yellow billed blabber - *Kariyila kili*

This is a noisy bird-chirping, chattering and Squawking-live in flocks. They are endemic to South India. They prefer dry climate-start foraging by dawn-lizards &scorpions

**White breasted water hen - *Kulakozhi***

They are seen at dawn and dusk. They probe with their bill in mud or shallow water to pick up insects / small fish-Both sexes incubate eggs.

Other common animals reported are-

Asian palm civet-Marapatti

This is frequently met with in sites nearby sacred groves where they can get rat, mice, frog, small mammals, fruits like mangos etc. Though people talk about civet, it is not clear whether it is Indian small civet which yield perfume or the other palm civet which is arboreal. As they are around sacred groves, it could be palm civet.

Monitor lizard .(Udumb)

They have the scale for protection. Hair at the back has been converted into large brown overlapping scales. They live in hollow trees or burrows. They are not only nocturnal but seen in day time also. They have long neck and forked tongues, and food is mainly insects, crabs, small snakes etc. Study reveals that they are particular for daily food. Also they are not poisonous though they may bite human beings.

Malabar large spotted Civet. (Veruk)

This civet has dark mark on the cheeks. They feed on small animals, eggs & vegetable. Little is known about their ecology.

Role of termites

Termites form a significant element of soil micro-fauna. The food of termites mainly is plant material. Termites can also feed on animal products such as dung, fresh mammalian carcasses. Studies on termites also reveal that they have no sight and they are deaf also. They recognize their nest mate by their special odor. They leave scent trails to food sources outside the nest. The scent comes from a gland present on the under side of the abdomen.

Below ground nests are very common where moisture remains at low levels throughout the year. Here evaporation and desiccation remain low. But it is noticed that many SGs have termite mounds above ground. They break down litter into smaller particles and expose inner surfaces of litter for early action by bacteria and fungi. Their mounds are seen in some of these SGs where leaf litter is plenty during cold season. They fill their mouth with moist soil and mix it with saliva-it works as cement for building the mound

This mound was seen in Bhuvaneswari kavu at Palarivattom.

The influence of termites on living trees adversely affects timber production. But their activity on fallen and dead wood in sacred groves improve the soil fertility. Termite take active role in cellulose processing and soil bioturbation. In doing so they establish symbioses with both microbes in the guts and many organisms in their mounds. They act on soil and litter by feeding and excavating soil. They break down litter into smaller particles and expose inner surfaces of litter for early action by bacteria and fungi..

Carbon sequestration

Sacred groves cannot be taken as an isolated system. By its presence amidst a mosaic of landscape such as fringe forests, cultivated areas and human settlements sacred groves enhance the landscape heterogeneity and biodiversity. An assessment on this contribution by sacred groves is a matter of study to be undertaken by bio-diversity organizations.

CHAPTER VII

SOCIO CULTURAL ASPECTS

Worship/ Deities/Folklore/ Folk Arts

General

The district of Ernakulam is situated in the central region of Kerala bordering the districts of Thrissur in the north, Idukki in the East, Alapuzha and Kottayam in the south, Lakshadweep Sea (Arabian Sea) in the west. The district is an amalgam of a hoary heritage and global growth of industry and commerce. The district was formed in the year 1958 and presently comprises of seven Taluks such as Aluva, Kanayannur, Kochi, Kunnathunad, Kothamangalam, Muvattupuzha and Paraur. For the outside world, Ernakulam is part of Kochi referred to in the history of Kerala as the Queen of Arabian Sea. The densely populated Ernakulam District embodies the achievements of the Kerala State in literacy, industry, trade and commerce. With an inclusive culture, relatively high per capita income and an unstoppable interest of the people in updating themselves of the political, economic, social and cultural happenings in the national and international spheres, Ernakulam represents the high modern phase of the Kerala society.

From ages it has been a popular choice of business for many and that is why, in this part of the state one can find prominent impressions of all seafarers from Europe and Middle East. The Chinese fishing nets which are one of the interesting attractions here was first swayed in 1350 AD. Be it the Dutch Palace or Jewish Synagogue, Bolgatty Palace or the Portuguese Architecture all enhances the heritage of the state. It may also be noted that Ernakulam district has around six synagogues at different places which clearly provides the evidence of a cosmopolitan environment and culture prevailing in the place for ages. Even the structures and architecture of the synagogue reveal facts on how diverse religions co-existed in this area for years in the past.

Socio Cultural and Religious background of the district

It is said that the term 'Ernakulam' is linked to different sources, temple oriented, mythological or geographical. The name Ernakulam was derived from the Tamil words Erayanar and Kulam which refers to the divine abode of Lord Shiva. There is also a belief that the name of the district actually was derived from the pond near Lord Shiva Temple, Rishikakulam which is based in Kochi near Rajendra Maidan. In the year 1405, the king of *Perumpadappu* shifted its capital from Mahodayapuram to Kochi and later known as the

King of Kochi. The King provided the Portuguese traders all the facilities and the trade flourished. Eventually the relation between the King and the Portuguese became strained and with the support of the Dutch, the King succeeded in eliminating the Portuguese from Kochi. During the early period, people followed a practice independent of any religious philosophy. They worshipped nature, totem Gods and Goddesses and number of spirits. During the period of third century BC, Jainism and Buddhism entered the land. The mode of worship of Jains was based on peace and tranquility of mind; their tenets attracted large number of people. Jainism had its contributions in the field of temple architecture. Buddhism paved the way for learning and literacy.

The Brahminical influence came in the region during the fifth century and thereby Buddhism and Jainism diminished gradually. Thereafter the mode of worship changed, the great efforts of Sree Sankaracharya resulted in the revival of Hinduism. The literary compositions of Thunchat Ezhuthachan added to the movement.

Though Christianity reached the country in the first century AD, by fourteenth century a large number of people became ardent believers of Christianity. The arrival of Portuguese during the fifteenth century, then the Dutch and thereafter the British, all accelerated the growth of Christianity drastically in the land.

The growth of Islam religion got grater momentum during the Mysorian invasion, but it had little impact in the district during those days. Later the spread of Islam got accelerated in the district especially in the taluks of Muvattupuzha and Aluva.

In short, the district is a cradle of various philosophies, either Indian or foreign, with great religious tolerance.

A conspicuous cultural reality of the district of Ernakulam is the harmonious co-existence of people belonging to different religious communities and faiths. Kochi was a Centre of Jews community. A Jewish town was set up in Mattanchery in between 1565 AD and 1601 AD for which the then king of Kochi, Kesa Varma provided all facilities. The Mosques in Mattanchery, Fort Kochi and Edappally are centuries old. The five-hundred-year-old Kalvathy Mosque in Fort Kochi was built by the Arabs who had trade-ties with Kochi. Christians, Muslims and Hindus (the majority) were exhibiting a harmonious life in the district. Though once the Jews had a remarkable position in the field of trade, their population declined day by day and now their existence in the district is negligible. Communities like

Anglo-Indians, Jains and sikhs lived in the district peacefully. There are a number of well-known places in the district which are very important to the various religious communities. The Mahadeva temple at Aluva where the Aluva Sivarathri Festival takes place, the Aluva Manappuram in Periyar river, the Kallil Bhagavath temple, an ancient Jain temple, Kalady, the birth place of Adi Sankaracharya, are important for Hindus around the World. Malayattoor, Vallarpadam and Edappally church for the Christians, the Mosque in Mattancherry are all important worship- pilgrime centres.

The general opinion is that Jainism and Buddhism entered in the State during the 3rd Centaury. Though Christianity is believed to have arrived in AD 52, its spread accelerated only by the arrival of Portuguese. According to the latest statistics, the religious composition of the district is Hindus 45%, Christians 38%, Muslims 15%, and the remaining Sikhs, Buddhists, Jains and others. Taluks like Muvattupuzha, Kothamangalam and Kochi have more Christian population than other taluks.

The Concept of Sacred Groves

Traditional and indigenou communities in India are of the religious belief that medicinal groves and plants are sacred in nature. Sacred groves (SGs) are patches of trees on forest land that are protected communally with religious zeal and connotations. These forest areas have been protected since ages by traditional societies and indigenou communities with their socio-cultural and religious practices. Sacred groves as a rule are treated piously. Sacred trees are prohibited from cutting and not axed except when wood is needed for the religious purposes like construction and repair of temple buildings or in cases like worshipping, death ceremonies and temple rituals. Thus, SGs carry direct and everlasting pious status and assist in maintaining social fabric of the society. Sometimes, they are also known as natural museums of giant trees, treasure houses of threatened species, dispensaries of medicinal plants, regulators of water sheds, recreation centers for urban life, veritable gardens for botanists, gene banks of economic species as well as rare and endangered species, paradise for nature-lovers and so on.

In India, different religions are having different traditions, beliefs, and rituals that are associated with conservation of biodiversity and forests. In Hindu religion, it is a traditional belief that nature shows a reverence for five basic elements i.e., Earth (*Prithvi*), Fire (*Agni*), Water (*Jal*), Air (*Wayo*) and Space (*Akash*). All the five elements are treated as a body of God and are worshipped. These five elements are protected for religious, cultural and

spiritual reasons. There are many studies entitled to further quantify this ethics, which leads to biodiversity conservation and sustainable ecosystem (Pal and Mukhopadhyay [2011]).

Cultural impact on Sacred Groves in the District

From time immemorial, the original groves came in to the hands of individual families and remained family-owned property. As the families split into smaller units, many of the members retained the grove with the place of worship. Since many families were unable to follow the 'Kavu' rituals, they were handed over to organizations like the Devaswom Boards or local trusts and temple committees. Many of the 'manas' which were in possession of extensive area of Sacred Groves, and when it became financially not viable for these families to maintain it, were forced to hand it over either to Devaswam or local committees. Any number examples of such sacred Groves are available in Paraur Taluk.

Unlike in other neighboring districts like Kottayam or Thrissur, the number of sacred groves in existence as well as its extent is a matter to be analyzed with respect to the cultural background of Ernakulam. The total number of Sacred Groves in the district is 708. Of which Kunnathnadu taluk supports the maximum, 193. The largest SGs in the district are also in Kunnathunadu taluk, the famous Iringole Kavu (25 Acres) and the ancient Kallil Bhagavathy temple kavu (30 Acres), both nearer to Perumbavoor town. The lowest number of 37 SGs is in Kochi taluk. This is because of the geographical situation of the taluk, most of the land

Kallil bhagavathy temple

area is intercepted with back waters. Though Paraur and Aluva taluks show a greater number of SGs, the extent of each SG is very low, average 10 to 15 cents or even less. Ownership pattern also shows that out of the 708 SGs,

570 are owned by families or family trusts. This also show that from time immemorial, the SGs were owned and maintained by families.

Astrology has an important role over rituals and offerings and preservation of the sacred garden. Astrologer decides the date of festivals *in kavus* where there is no fixed date. He declares the need for additional rituals *during* festivals. In certain cases,

Astrologers by their verdict becomes saviors of the kavu and in certain other cases they are alleged to be turning into a threat for the existence of sacred groves. In order to cut trees from sacred groves for financial benefits or to clear the land for construction purposes, the astrologer's advice is obtained to conduct *punaprathishta* (shifting of the Kavu now-a-days).

Worship

At various stages of evolution, people adopted different modes of worship like nature-worship, spirit-worship, image-worship etc. Ownership of the *Kavus* vests with *Namboothiri* (Brahmin), Nair and *Ezhava* communities, and majority being brahmin families called *illam or mana*. A few *Kavus* belong to scheduled castes. Though the ownership is as mentioned above, *poojas* are mainly *brahmana pooja*. *Abrahmina poojas* are performed by *pulluvas* or other members belonging to the Scheduled castes.

The *Ayilliam pooja* in the month of *Thulam* is regularly conducted as a special worship of the *serpent god*. The tasty *Noorum palum*, the favorite offering to the *Nagar*, is prepared using honey, thinamavu, gur, sugarcane, kadalipazham, turmeric powder, milk, avil, pori etc. In certain SGs, *Ayilliapooja* is conducted in the month of *Kanni* or in the month of *Kumbham*. In some SGs, *sarpabali* is a kind of worship to propitiate the *serpent god*.

Naga prathishta in Kallil temple

The rituals and rites performed in the SGs vary with region, caste and patron deity. The worship styles are caste related. *Brahma pooja* is conducted only by the *Brahmin poojaries*, *pulluva pattu* by the *pulluvas*, *kakarasi* by the tribes etc.

Since majority of SGs belong to families, worship patterns, rituals and festivals vary from place to place. Unlike in the case of SGs attached to major temples, expenses on *poojas* and festivals would be very restricted because they themselves have to find out

the resources for it. Expenses to meet salaries for the *poojaries* and supporting staff, materials

for poojas etc are limiting factors to restrict the frequency of these activities. In the family SGs, daily poojas are not taking place, instead lighting lamp in the SGs by members of the family is uninterruptedly carried out. It represents unity and collective action of the family members.

Deities

Generally, the Deities in the Temples include a wide spectrum based on different *sankalpas* (splendid conceptions). But in the case of Sacred Groves, the Deities are a sort of Spirit cult. Worship of these semi divine sprits is primitive. Though these are classified in many categories, those most common in this district are *serpent* deities.

All classes of Hindus consider *Naga*- worship as divine. The *Serpent* God is known by different names. Devotees consider it necessary to worship them to ensure progeny and prosperity in their families. Generally, there will be a stone basement- *chithrakoodam*- with granite stone *prathishtas* of *Nagaraja*, *Nagakanyaka*, *Nagayakshi*, *Naga kali*, *Naga Bhagavathi* and other attendant *Nagas*, all facing the east. Among the idols, the idol of *Nagaraja* is slightly bigger. The devotees treat *naga* idol with great veneration and some sort of fear. The general belief is that if a person shows disrespect or kills a serpent he will meet with punishment. Generally, the *deities or prathishtas* in the SGs in the district are:- *Nagaraja*, *Nagayakshi*, *Arukola*, *Bhadra*, *Ananthan*, *Paranagangal*, *Akhila sarpam*, *Kughi nagam*, *Kari nagam*, *Naga unni*, *Anjana mani nagam*, *Ayila yakshi*, *Bhadrakali* etc. Other dieties being *sastha*, *sivan*, *brahma rakshas*, *vettakorumakan*, etc.

As an exception, the famous Iringole kavu in Perumbavoor is not a sarpakavu. It is a forest temple dedicated to the Goddess Durga. It is believed that the gods and goddesses surrounded the power in the forms of trees and plants. Thus, the area developed into a beautiful thick forest. None of the Sacred Groves in Kerala support such a thick evergreen luxuriant vegetation. It is pertinent to point out that in spite of the presence of large number of visitors including tourists, students etc every day, the vegetation in the kavu has not suffered any type of degeneration or degradation except some marginal encroachments in the out skirts of the forest.

Offerings

Sarpa bali, *Noorum palum*, *Dhara*, *Nagaroot* etc are the usual common offerings performed in the SGs. Offerings for deities in temples are different from that in the SGs.

In Onelikudy paradevatha kavu[Iramallur village] offerings are made in the form of Toddy, Arrack or Brandy. 'Kuruthy' is another form of offering done here. The word 'Kuruthy' means ritual slaughter. In the present-day conditions, instead of killing animals, raw turmeric and lime when mixed in water will become blood red coloured liquid and it is poured on the idols as offering and also consumed by worshippers..

Folk Arts

The art, culture and customs of the people of Ernakulam district are mostly the same as those of the people in other districts of central Kerala. The folk songs in the fields during sowing and harvesting, the awakening songs by the Panans, and a few other dance forms of the traditional style associated with festivals like Onam can still be seen. A large number of art forms including folk dances, dramas, folk-songs, etc., have gone into oblivion. *Kalamezhuthu, pattu, Pulluvan pattu, Thullal, Pambum thullal or Sarpam thullal, Velakkali, Padayani, Gandharvan pattu*, etc are some of the folk art forms performed during the festivals in the SGs. In major temples, *Ganamela, Bale, Drama, etc are performed during temple festivals*.

As pointed out earlier, majority of the SGs in the district are family owned. Therefore financial resources are limiting factors for conducting festivals in a big way. There are many SGs where there are no annual festivals. The main reason being finance. Many SGs perform the festivals in a simple way only. Thus the common art forms or performances are limited to very few SGs.

Mudiyet is an artform performed in Vellat Sree Porkali bhadrakali kavu. Mudiyett is a common folk art performed by members of *Marar or Kurup* communities in the Central Travancore area.

Mudiyet

It is performed in Bhagavathy kavus only. A complete team consists of 16 members including Kalamexhuthu artists and vocalists. The style of presentation of this art form varies from from place to place. There are Koratty styles, Keezhillam styles, Pazhoor styles etc.

The ritual of *Kalamezhuthu* develops through three stages - *Kalamezhuthu*, drawing of the picture, *Kalam*, *Pattu*, which involves the rendering of the myth related to the deity to the accompaniment of some traditional instruments and *Kalam Thullal*, the final stage in which the myth is performed in a stylized form following which the *Kalam* is erased. This art form is multi-dimensional in that it bears religious, aesthetic and social aspects.

Chakyar koothu

Chakyar Koothu is another folk-art form in these areas. Here the performer, the Chakyar, narrates episodes from puranas. It is a solo performance. The narration uses wit and humour to draw parallels with current events and local situation. Koothu has traditionally been performed only by the Chakyar community. Two instruments accompany the performance - a mizhavu and a pair of ilathalam. This is different from the Nangiar Koothu, which is performed by women called Nangyarammas who belong to the Nambiar caste, and is a more highly refined theatre art.

CHAPTER VIII

SOCIO-ECONOMIC DIMENSION

The number of Sacred Groves in Ernakulam district is estimated to be 708. Most of them are under private management. The number under public management or Devaswom Board is very negligible, say about 138 unlike in the case of southern districts. Another peculiarity is that many of the groves - around Aluva are very small between two cents and five cents. Evidently the socio-economic condition mainly revolves around these small ones. Even if an SG is small having only 2 cents the essential rituals are being performed irrespective of the size. This is one of the reasons for including them in the list. Some SGs are attached to temples owned by families.

Social Harmony

The role of sacred groves in social harmony is immensely high though intangible. The devotees coming from different families and members of the same family living at different places assemble for important functions to rejuvenate relationship and friendship. They jointly put their might in organising functions. Members of the family as well as local people including children get opportunities to display their inherent talents in various arts and many cultural programmes.

Communal harmony

The element of communal harmony is exhibited in the case of some SGs here. The communities under Hindu religion such as Namboothries, Nairs ,Parayas/ Harijans own many sacred groves under private category. Some of the examples are stated below.

Rituals and Installation of Idols.

A peculiarity in this district regarding the rituals and installation of deities is conspicuous when compared to other districts. Some examples are narrated below.

- i. Chenganad Kavu-of Kothamangalam ,Id-31, of Iramallur village-20 cents, the idols are installed under trees.
- ii. Chittattukavu-Kothamangalam taluk-Id. 59 of 1.5 Ac. in Pindinae village , the deities Sree Durga and Sree Bhagavathi are installed sitting face to face.
- iii. Bhakthananda Aasram kavu-Kunnathunad taluk, Id.2, in Thiruvaniyur village having 50 cents have 41 naga idols-
- iv. Similarly, the Nenmeni Mana kavu of Kunnathunad-Id.28, has 28 Naga idols.
- v. In Chittanad Mullackal Kavu of Kunnathunad taluk-Id.10 and having just 5 cents,falling in Kunnanath Village there is no idol. Here, only trees are worshipped.

RITUALS

Here again there are some variations. A few cases may be seen below-

- i. Animal sacrifice-In Mynoot Kavu of Aluva village, Id.7, hen sacrifice is reported.
- ii. Feeding fish-In Cheriya Narasimha Swami kavu of Aluva village-Id.14, this feeding fish is a main ritual.

The Financial Scenario

The financial status and the employment generation centered around sacred groves depend on the quantum and frequency of rituals. There is huge variation in this regard. Starting from only one Pooja and one festival in an year up to daily Pooja and five festivals in an year are recorded. The rituals in SGs attached to temples is more or less the same. But in some SGs managed by Public trust and the like and in some under family management the rituals are very elaborate as being done by Temples. The Munduruthy kavu in Paraur taluk (Id.63), Chembola kalari kavu in Paraur, and Sree Porkali kavu in Moovattupuzha are examples. Here the rituals are elaborate and money in circulation is very high. Here including the priest three people are getting employment throughout the year. The priest gets Rs. 20,000 per month. Helpers also get around Rs.5000 per month. Such cases are very rare. In general in the case of most of the SGs under Trust etc, and family owned, there is no comparison with the above cases. There is once a year Pooja and one festival in an year on a small scale and employees are very few except a priest. Many of the activities are managed by family members.

On a rough estimation following is the state of money in circulation in the case of an average typical SG coming under the three categories.

1-SGs attached to Temples. For one year

Here only a part (15%) of the expences of the temple as a whole is set off against the Kavu. Employment generation on account of kavu- 50 man days.

Wages Rs. 30,000.

Maintenance,..... Rs.20,000.

Festival- Rs. 50,000. Income- 1.5 lakhs.

2-Trust,Janakeeya Committee etc.

3- Family owned.

Employment-..... 50 Mandays Employment..... 30 Man days.

Wages-..... Rs. 50,000. Wages.. Rs. 15,000.

Maintenance cost-.... Rs. 12,000. Maintenance cost. Rs. 12,000.

Festivals Rs. 2 lakhs Festival ... Rs. 50,000.

Income-..... Rs. 3 lakhs Income..... Rs. 50,000.

TOTAL PICTURE of MONEY in CIRCULATION in the DISTRICT in ONE YEAR

Cost in Rs. Lakhs

Management	Employment- Mandays	Wages	Maintanance cost	Festival cost	Income
Temples-SGs- 39	1950	11.7-	7.8	19.5	58.5
Trust/Local-Committee- SGs- 99	4950	49.5..	11.88	198	297
Family ownedSGs-57o	17100	85.5	68.4	285	285
TOTAL-	24,000	146.7	88 .08	502.5	640.5

CHAPTER IX

MYTHS AND LEGENDS

A myth is a story, based on traditional knowledge passed on to generations, which people are inclined to believe depending on their attitude to the subject matter. Although some myths can be accounts of factual events, they have become transformed by symbolic meanings. Myths or stories about sacred groves would be fascinating or even frightening.

A legend is a semi true story, which has been passed on from person to person and has important meaning or symbolism for the culture in which it originates. A legend usually includes an element of truth, or is based on historical facts, but with mythical qualities

1-Iringole Kavu

According to the legends, King Hamsa imprisoned Devaki and Vasudevar due to the prophesy that their eighth son is destined to kill Kamsa. In fear Kamsa slaughtered the children of Devaki and Vasudevar when they are born. Before the birth of eighth child, Lord Vishnu appeared before Vasudevar and Devaki and asked them secretly to carry the eighth son out of the prison cell to be raised by his foster parents Yasoda and Nanda in Gokula. Soon after the birth Vasudeva shifted baby Krishna to Vrindavan and placed a baby girl in the cradle. Kamsa decided to kill the baby girl too. When he lifted the girl to kill, the baby skipped from his hand and became a supernatural power and remained in the atmosphere as “Irinnole”. Later the area is known as “Iringole”

**2-Nagayakshi Kavu-Paaur ID-Paraaur-54**

This SG was large one in the early days. But there was no Pooja and it was later sold away. Deterioration, started and the local people having faith in it, really felt many sufferings both mental and health problem. Local people formed a trust and managed to take over a small area here and installed an idol of Nagaraa . Then they started the Pooja and enjoyed the benefit by saving all from their problems.

3-Siva rangini kavu.Cennamangalam-Village-Id,**Paraaur 87**

This is a large SG of 56 cents. One lady who was deaf and blind managed to go to the pond of the SG for bath almost every day. Once while coming back after her bath she heard shrilling screaming voice. Apparently it was confronting some kind of obstacle that could end its life. Though she was deaf she somehow felt it was from a serpent. She immediately threw her shawl towards that direction and the serpent was saved.

The local belief among devotees is that this old lavialable.dy could relief from her blindness and deafness. More deails to satisfy the enquiries and doughts from people are not available.

4-Alpara Kavu,Sree Bhagvathy.Perumbavoor-Perubvoor Id-107

The legend says that once Sri Vilwamangalath Swamiyar visited this place and Goddess Bhadrakali gave im full darsan in Her fiercest form. Swamiji Swamiji prayed to Goddess to be present at this place to bless the people.Goddess agreed and Swaminji invoked the powers of the Goddess on a near *Sila with the sankalpa* of Sri Durga of mild nature.He also christened the place as *Aa-para* (that rock)-and the name of temple as Alpara-Kavu.

5-Sri Thrikkayil Siva templekavu- Pattimatom Village.Inadd-22 Kunnahu

Here the lend is simple. The Lord Siva appered as swayambhoo idol to bless the local devotees.The local people constructed a temple with idols of Lord Siva, Lord Ganapathi. On account of this the kavu isvery poulr with devotees getting in more numbers.

6-Sri Keeramkuzhi Mahadeva Temple Kavu.

The temple is situated in a very old and extensive sacred grove.The legend says that onday an agricultural lady who was collecting fodder sharpened the chopper on a sila. The

blood oozed out profusely from the Sila and th fainted seeing this.Tw ladis came to her rescue and reported the matter the chftans there. The prsana conducted the cheftans revealed that the power of lord Siva was on the Sila and a tmple was buit there. Later a shrine dedicated to Lord Rama was built facing Lord Siva.

7-Panchimangalath Sree Bhadrakai Ksethrakavu.Uramallur village-Id-5 Kothamangalam

Around this ara there was wide spread infestation of small pox.People conducte regular Pooja on Sree Bhadrakali along with the ritual.THEEYATT.Panthm, Kedavlakku and dance were carried out. People got complete relief and they live happily.

CHAPTER X

THREATS & RECOMMENDATIONS

There are various factors that pose a threat to the survival of some of the SGs. This has direct bearing on the attitude of the custodians. During the period when joint families system existed there used to be a sense of feeling to strictly follow the maintenance of the SGs situated in the *tharawad* property. When the system made a change over to partition of family properties, many SGs got destroyed or reduced in extent. But that tendency, though not arrested completely, has become a rarity now on account of popular belief in prayers and role of SGs in social binding of culture.

Following are the observations regarding threat in this district under various issues-:

THREATS

1. Intention to reduce the extent for self-motive

Already most of the SGs have been reduced in size and this appears to be a fait accompli.

2. Finance for maintenance of SGs.

Scarcity of finance is keenly felt by most of the custodians.

3. Grazing

Does not appear to be a menace since other sources are plenty in this extensive paddy fields around.

4. Dumping Solid Waste

The SGs are very distantly located from congested areas or in the vicinity of the residenses of the custodians. This reduces the severity of this problem.

5. Damage by invasive species.

Most of the Sacred Groves are covered with the invasion of numerous climbers and isolated small bits heavy weeds do constitute a threat to the conservation of Kavu.

RECOMMENDATIONS

1. Separate project for Central Assistance to Sacred Groves

Financial grant for maintenance of sacred groves received from Government of India is being distributed to the custodians of sacred groves. The present allotment is naturally very low when compared to the actual number of SGs in Kerala. According to the recorded

information with Government (refer. website on sacred groves) the total number is 1500. By now with the results coming out of IFK's study in ten districts the total number exceeds 8000. It is likely the total in the whole state would be around 10,000 and at least 30 % of them deserve financial and technical assistance from government agency. More over forest department had no authentic data on the total extent of vegetation under SGs in the state except those recorded in ten districts by IFK. It is high time that KFD has to come out with detailed proposals for central grant to the custodians who have been protecting these natural patches rendering valuable and intangible contribution to bio-diversity.

2. Awareness Campaign

Social Forestry wing or Bio-diversity wing of KFD should consider planning awareness programmes in conservation of sacred groves for the benefit of the public & Custodians of sacred groves particularly regarding hygiene of the grove and premises. Present status and importance of sacred groves should be one in the agenda for extension activities targeted on students.

3. Production of quality seedlings of plants

Social forestry wing may also consider producing quality seedlings of species which are essential trees and other plants as would be emerged from this report. This has to be done after convincing and ascertaining the willingness of the custodians. A few seedlings considered to be typical for sacred groves are noted below for information of social forestry wing of KFD.

Trees- *Vateria indica*, *Aglaia elaeagnoides*, *Holigarna arnottiana*, *Ficus* species, *Aphanamixis polystachya* (Chemmaram), *Vatica chinensis*, *Cynometra travancorica*, and *Dipterocarpus indicus*. These are producing plenty of fruits most of which are liked by fauna, there by promoting biodiversity status. *Dipterocarpus indicus* (kalpine) is a vulnerable species.

Shrubs- *Clerodendrum serratum* (Cheruthekku), *Anidesma diandrum*, *Allophyllus serratus*, *Flacourtia indica*, *Glycosmis pentaphylla* etc. These plants have medicinal properties.

Climbers like *Alangium salvifolium*, *Coscinium fenestatum* and herbs like *Scoparia dulcis*, *Crotalaria retusa*, *Geophila repens* having medicinal value also can be promoted in sacred groves.

More details if required can be seen in pages 21-23 under the chapter-IV Composition of Vegetation.

4. Dealing with invasive species

This is posing a major threat to the existence of sacred groves. Removal and preventing further growth of invasive species is very essential. But the methods to bring about this task without affecting the general structure and ritual concepts have to be designed by a team of forest officials and scientists conversant with this issue which may be ideal.

5. Ensure fair distribution of grant

When grants are distributed to SGs, it has to ensure that the process is made as fair as possible by verification by a superior. Details if any required can be gathered from IFK in districts where field study has been completed. Poorly maintained SGs if any may be considered only if improvement is ensured. An effective follow up on utilisation after distributing grant is essential

6. Encourage waterholes or ponds

The necessity of water availability for attracting small fauna and amphibians is very essential or a healthy environment for sacred groves. Hence this may be insisted for SGs above 10 cents in extent while granting financial assistance.

Publicity for data collected.

In order to bring the Id numbers of the sacred groves to the notice of all custodians concerned, department may take action for publicity in the press and social media and ARANYAM Magazine.

7. Research studies

The following studies by a research wing may be considered.

- i. Natural regeneration of various plants in SGs.
- ii. Role of fauna like termites, bats and many frequenting birds.
- iii. Identifying keystone species.
- iv. Detailed study on soils in Sacred Groves.
- v. Methods to quantify role of SGs in Carbon Sequestration.

8. Sharing Data

The knowledge gained in carrying out studies on sacred groves may have to be shared with other related organizations within and outside the forest department including Biodiversity Board, Department of Science and technology and other stake holders since such information is required for the benefit of the people as a whole.

9. Recognition on contribution for Carbon Sequestration

Above all it is necessary to recognize the service of the custodians in the appropriate manner and give them enough encouragement for the valuable amount of carbon sequestration being contributed by them.

10. Intervention by Government

The sacred groves are being well protected and conserved in general by the custodians without any legal enforcement. Therefore any intervention in the affairs of these sites by Forest Department or Government need to be planned and designed with caution not to disturb the freedom of custodians as it is a sensitive issue.

Norms Suggested for Distribution of Grant under International Bio-diversity Campaign to Sacred Groves by Social Forestry Wing.

1. Necessity

Sacred Groves are now fragmented habitats housing gene pools and have become the last refuge for many threatened, endangered and endemic plant and animal species. Outside the forest limits they constitute isolated vegetative patches in a mosaic form and are protected by the custodians who contribute in Conservation of Bio-diversity and establishment of healthy bondage among local people through faith in God. But they are not free from threats that can cause degradation or disappearance, particularly when there exists rising land value and greed for land for non-forest purpose. Hence it is only appropriate that all possible assistance for the upkeep of this pristine vegetation is extended by Government for proper maintenance.

3. Identification of activities required for giving grant.

Activities

- Construction of Compound Wall,
- Cleaning and maintenance of existing pond
- Diggig ponds where ever feasible.,
- Eliminating invasive species scientifically.
- Supplementing regeneration of tree species----site specific.
- Monitoring growth and regeneration of important plants and movements of fauna in selected SGs.
- In general, observe phenology of plant and animal life, by engaging trained students in selected SGs

This is essential for creating awareness among the youth on conservation of Bio-diversity.

4. Eligibility

- SG should have old trees of typical species under reasonable upkeep.
- Should have local acceptance in the neighbourhood.
- Low annual income.
- SGs associated with prominent temples and under Public Trust, Devaswom Board etc, to be **excluded**.
- Eliminate SGs having ownership dispute.
- Proper performance in utilisation of previous grant if any.
- Contribution in carbon sequestration.
- **Grading-** Based on the above considerations, the SGs in each district may be categorized into three or four categories before fixing the quantum of grant.

5. Allotment of Funds

Total amount received may be apportioned among various districts according to the number of SGs. As regards the districts where IFK has taken up the inventory, the number can be taken in descending order as below.

Alappuzha	-	2242-Nos.
Kozhikode	-	1231 ,,
Malappuram-	-	1120
Kannur	-	1096 ,,
Thrissur	-	970 ,,
Kollam	-	895 ,,
Pathanamthitta	-	721 ,,
Ernakulam	-	708 ,,
Kottayam	-	562 ,,
Thiruvananthapuram	-	452 ,,
Kasaragod	-	392 ,,
Palakkad and	-	184 ,,
Idukki	-	32 ,,

6. Financial Support

i. Financial assistance

There are quite a number of sacred groves under the ownership of individual families where keen financial stringency is being experienced for maintaining them. Reducing the frequency of Pooja is the one way to bring down cost. It is only the faith in God and feeling of the proud possession of the ancient vegetation that is preventing them from dispossessing these groves. Though Government is extending financial assistance to a few of the sacred groves that does not seem to be sufficient enough to overcome the requirement of the large number of cases that exist.

A grading in the form of giving reward for the best managed sacred grove in a Taluk or District can be considered if funds are available. Irrespective of the quantum of amount, awarding such a grant would go a long way in creating awareness and enhancing bio-diversity conservation.

When land value is high and need for cultivable land is also rising , it needs appreciation of those protecting the sacred groves by providing additional incentives for maintaining *kavus* and maintaining biological diversity. One way of showing appreciation is by exempting these *kavus* from land tax as they maintain small refugia for vanishing biological entities.

ii. Special consideration for abandoned and no Pooja SGs-

As there are comparatively many SGs, in Ernakulam district which are partly or fully abandoned or those where Pooja is not taking place. At the same time in most of these SGs the vegetation is thick and plants are protected. It is suggested to identify such sacred groves and encourage by Forest Department to revive activities particularly when there is a Legislative Committee to look into such matters.

IFK will be happy to extent its co-operation in such matters through appropriate representatives if called upon.

iii. Carbon credit

Sacred groves represents areas of typical community conserved biodiversity vegetation without any element of pollution. To that extent ecological dimension is very deep there. The contribution of the custodians of Sacred Groves in preserving such areas without any external compulsion and the benefit that is delivered to the society in the form of carbon sequestration deserves ineffable appreciation and reward.

In a similar case, though not so pronounced as in the case of SGs, the owners of Cole Paddy lands have been recognized by Government of Kerala recently and specific grant to

them has been sanctioned for such environment friendly practice. Taking the cue from this stand it can be expected that the Govt. of Kerala would show the sagacity to take a policy decision for awarding grant to the custodians of sacred groves in a fair manner.

In this context, it is pertinent to note that the idea of extending carbon credit to farmers, institutions and communities is being considered at international level. It has come out in the press (vide-The Hindu daily dated 25th Aug. 2021) that COP26- which is part of United Nations Convention on Climate Change-has recognized this idea of Net Sink Credit- and this would be discussed in the forthcoming conference on Climate Change in Glasgow this year.

7. Selection of SGs

In selecting SGs from among the applicants, preference can be given to community owned SGs and SGs existing on areas of high land value like those in cities, towns and road sides.

In making selection, the applications may be examined by a committee at district level consisting of officials from Forest and Local Self Government.

In case the committee need further information about the applicants the members of IFK team may be able to provide the required details based on their visits.
